

Article 267: You Are A Language-Drug Addict –part 2

Dopamine sustains your body and energy by encouraging your eating and drinking ...and ensures future generations by maintaining your desire to mate.

While some drugs act directly on receptors to create a “rush” of dopamine in your brain ...which creates instant feelings of euphoria, other drugs block dopamine, and still others create a prolonged stimulation of wellbeing, ...judgment-linguaged chemicals seem to follow all of these patterns.

Since drugs ...including emotional chemicals, acting through dopamine, encourage continuous pleasurable wellbeing behaviors (addiction) as strongly as they support basic survival instincts and actions, these addictive behaviors, including judgment-created emotional chemicals, quickly become a matter of life or death. Is it any wonder then that ending your judgments and living your life free of emotional chemicals seems so difficult ...even painful? In fact, your brain ...and thus your beliefs and life are saturated in a soup of these judgment chemicals, which reprograms your brain to respond almost automatically to these emotional chemicals. You believe and think these addictive chemicals and call this “free thinking”, and you reprogram your nervous system to respond to these cravings ...and call that your “genetic precoding”, which of course you can do nothing about ...because it’s “in your genes”, ...right?

Brain scans of drug, alcohol, and nicotine addicts reveal that just the image or reminder of their addictive substance is enough to “trigger” a “brief high” of dopamine ...which demands that it be continued until a more-intense high is attained which will satisfy or temporarily relieve the gnawing craving. It is easy to see that the same process occurs in your mind and body with a language-addiction ...as one judgment demands another ...and another; ...and as repeated drug use creates chemical changes in your brain•body, the drug of linguaged-judgments producing addictive emotional chemicals creates similar undesirable changes in brain chemistry, programming, and functioning which persist long after you lessen or stop using your “language-drug of choice”. Frequently, this language-drug damage is so severe that it is irreversible ...in a single lifetime. And while death and resurrection offer you a new brain and nervous system and chemistry to work with, since the language of judgments continues unabated from generation to generation ...you tend to renew your “language drug of choice” ...and begin all over again.

As the brain of an addict~alcohol, sex, nicotine, other~is different from a non-addict, the brain of “a judgment-drug user” is different from a non-user~as adult is different than child~but this difference is not so clear because as the judgment-structure of language continues unchanged from generation to generation, bodies begin with a mild addiction ...which grows as they are raised and developed by severely addicted parents in an addicted society. It seems therefore that the addiction to the drug of language-judgments is programmed into your DNA ...which encodes the chemicals that are essential for growth and development such that your body’s tissues, organs, and functions start off mildly addicted to language-judgments which you have intensified through constant drug-use.

Are you beginning to understand why, in Genesis 2:16-17 of the Bible, “the Lord God commanded the man, saying, of every tree of the garden thou mayest freely eat; but of the tree of the knowledge of good and evil, thou shall not eat of it; for the day thou eatest thereof thou shalt surely die”? This had nothing to do with being “as gods knowing good and evil”, they were to warn of the addictive nature of the language-drug, ...especially when you consider the word “die” in terms of *losing vitality, activity, or force, ...to become weak*. As an alcohol user ceases to exist completely, language-drug users die from a full life ...and, unfortunately, lives and experience, again and again, the agony and suffering of their judgment-drug use ...which is similar to that of death repeated over and over. And as die means “to become apathetic or indifferent”, language-drug users become indifferent to living the empowered greatness of themselves ...as they are “dying for” the next “judgment-fix”, ...thus their declaredself life and greatness and promise gradually fade ...or “die away”.

Judgment-drug users surely die from
The self and life they truly desire.

Just as evidence seems to indicate that genes predispose individuals to alcohol, nicotine, or drug addiction ...or that these addictions have a genetic component, it is obvious that you are predisposed to language-drug abuse as well.

It has been shown that babies who are born from alcoholic parents and later raised in nonalcoholic families are still more than three times as likely to follow their biological parent’s pattern and become alcoholics themselves. Now, consider the fate of children born of judgment-drug users, there seems to be no judgment-free families to be raised in. If there

is “an addiction gene” or component for alcoholic, nicotine, drug users which lessens their struggles, this is not likely to be successful for language-drug users ...for there seems to be no judgment-free environment in which they can be raised and nurtured ...and allowed to function, ...language-drug addicts are on their own.

Many long-time drug users reveal a lack of particular dopamine~wellbeing~receptors, ...could this be a real lack? ...or the atrophy or wasting away of overworked receptors as a result of continued drug abuse? An initial lack of these wellbeing receptors suggests that these people, not experiencing the normal pleasures in themselves or in their lives, may have turned to drugs to “force” these pleasures ...or dull their displeasures. It seems that judgment-drug addicts follow a similar pattern of seeking-pleasure•dulling pain, ...are you living your judgments in this way? Are you daily medicating your self and life with judgment-drugs?

In a national research program, individuals who had never used illegal drugs were given a stimulating drug, ...those who had few wellbeing receptors enjoyed the drug-induced feeling, while those with many of these receptors were uncomfortable, ...could this indicate that people who are open and receptive to a life of wellbeing have many “normal” ways for living and feeling in these ways about themselves and their lives? ...while people who are lacking this receptivity, for whatever reason, are prone to seek almost any form of pleasure? We have seen many, many people who have shut down their lives become more and more critical and judgmental, ...could it be that their pleasure-wellbeing receptors have failed or become dulled after a lifetime of language judgment-drug abuse? It certainly seems so!

You have a taste for your self and life and promise
...or you will have a taste for language-drugs.

Your addiction to judgment-drugs can take the many different forms of regular drug use ...such as a preference for stimulating and exciting emotions, a desire for the deteriorating stages brought on by judgment-drugs, an indifference to rousing or stirring emotions and actions, or various forms off stupefaction, ...is your judgment use out-of-control?

While many drug users may never overcome their drug use in this lifetime, even with medical intervention and treatment in a drug-free environment, your language-drug abuse, even under the worst of conditions, can be overcome ...even while living and working in a language-drug abusive environment. You are more-easily addicted to

Article 267- 4

language-drug abuse ...and also more-able to ease your self and life out of this condition.

Are you truly enjoying your drug of choice?
